

Set Black Curls from Row G

- 24/8/63 Planted 12 seeds in one half of pot.
- 19/9/63 Three seeds have sprouted. First is 2" high and has two small misshapen leaves. Second is 2" high and has two leaves each about $\frac{3}{16}$ " diameter + crinkly. Third is less than an inch high without leaves. Apparently this seed carries recessive and lethal genes.
- 23/9/63 Two plants doing fairly well, new leaves appearing
- 24/9/63 Dug up defective plant of 19/9/63. Found the part above ground was really the root. Replanted it right side up.
- 1/10/63 Replanted plant beginning to show leaves.
- 14/10/63 Three plants now 3" to 10" high.
- 20/10/63 Two plants have yellow leaves at base. Top healthy.
- 22/10/63 added 100 cc of ammonia nitrate solution
- 25/10/63 Plants not doing much. The center leaf of groups of three are beginning to turn over but not as pronounced as the Hawaiian I.C. in large can.
- 28/10/63 Cool morning. Center leaves flattened out open.
- 7/11/63 One plant is throwing up a small runner and has a few yellow flowers. Perhaps it will make pink pods + beans.
- 8/11/63 Took photo of cluster of three yellow flowers.
- 11/11/63 Reset these three plants in row C position 27 at Magdalen
- 27/12/63 Dug up east plant position 27 and put in envelope
