Dear Sir:

Noted your ad in Qst Magazine about wanting
Battery receivers of the 1920 era.

I have a 1920 era tube tester. The brand
name is DAYRAD made by the Radio City Products Co.
It checks the UX and UY series of tubes. It is
in its own black bakelite case and measures about
5" x 7" on the face and about 2 $\frac{1}{2}$ " thick. It has
a tube chart stencilled on the face with appropriate
readings given. This is 110 volt model and is in
working condtion. It uses a 0-20 ma meter for in-
dicating condtion of test.

Cordially,
Dick, W9wft.
