

6th August, 1963.

Mr. J.E. Lousley, Secretary,
The Council for Nature,
41 Queen's Gate,
LONDON S.W. 7, England.

Dear Sir,

Certain experiments require plants with special mechanical characteristics. Annuals are preferred.

(a) Vines with large seed pods and clockwise direction of twine, the same as left hand screw thread.

(b) Vines with random direction of twine.

Perhaps you could insert a short note on the above in section entitled "Requests for Information" of your news for Naturalists.

Yours faithfully,

Grete Reber.
