

Hawaiian Standard from Row C

- 15/10/63 Plant four large seeds in corners of each of 15 pots. Soil from under trees. 60 seeds total.
- 20/10/63 Planted an average of six seeds (mostly wuffs) in each of fifteen large pots numbered 161 thru 175. The soil was recovered from four large pots of Smilax which were discontinued.
- 25/10/63 Only two beans planted on 15th show life. Dug several up, all swollen but still hard and not sprouted. Over a score planted on 20/10/63 show sprouts.
- 28/10/63 Two score beans have sprouted in pots planted 20/10/63. Several beginning to open and show leaves. Pots planted on 15/10/63 no change.
- 5/11/63 Dug up all beans planted on 15/10/63. Nearly all rotten with no sign of sprouting. Salvaged three very weak plants. Put them in another pot with sandy soil. Dumped out of 17 pots all soil from under trees. This seems toxic as these are second lot of beans lost in it. The first was two pots of pink seed planted on 14/10/63.
- 11/11/63 Planted the 15 pots of 20/10/63 in row G positions 1-15. at Magdalen
- 19/3/64 Harvested all dry pods (about $\frac{3}{4}$) in four bags. Very poor results.
