Dear Paul:

After writing to you on 3rd, an envelope arrived on 6th containing your red booklets for April, May, June. Ottawa April data is too sparse to make anything of. I've analysed the f_oF_2 values for Ottawa, Churchill, Resolute during May and June. The results are very similar to July as described in my letter of 3rd. Please send by air mail your red booklet for August 1988. This will complete the four summer months. I'll then send to you monthly details and average for complete summer. The subject has whetted my curiosity.

Thanks again for past favors.

Best wishes,

Grote Reber
