Greetings Robert:

Thank you for your letter of 18th. The Christmas rush delayed its arrival to 24th. Yes, the 17th is satisfactory. There is nothing in Hobart, so meet me at my home in Bothwell. When you come into Bothwell, the first major feature is school on rite. Just beyond school turn rite. Mine is large yellow place a block back from main road. This is tourist season, so you should reserve a rental car well in advance of your arrival. They will tell you how to get to Bothwell, about 50 miles NW of airport. If all else fails, ring Chris Marks, administrative officer at CSIRO at Hobart on 235555. He will get Mick Taylor or someone to bring you out. Explain you are with CSIRO at Epping. I do not have a home fone. However a message may be left with postmaster on 595609. His wife acts as messenger.

We'll first visit remains of my radio telescope, and then discuss future possibilities. Enclosed is copy of my letter dated 27/11/84 to Kerwin, plus copy of "Cosmic Static at 144 Meters Wavelength". These will give you some knowledge of background. Also I want to show you my solar heated house. I'm quite proud of it.

Looking forward to seeing you on 17th, I am

Sincerely yours,

Grote

17/1/85

Saw him 9a to 3p. We went to Dennis town & discussed equipment at my home. Explained solar heated house. He left two color fotos of supernova remains taken at 843 mc? at Molonglo observatory. Black is zero intensity. Blue is just detectable. Intensity rises as color goes thru spectrum green, yellow, orange, red, and maximum at white.
