Dear Grote:

It has been a long time since I last wrote you concerning our 408 MHz extension to the synthesis telescope, which your bequests assisted in coming to fruition. The first maps have started to appear, although we have not yet had an "official" opening of the facility.

The thesis that accompanies this letter was provided by the University of Alberta, to be forwarded to you in recognition of your role in this project. I hope that you will find it of interest.

With best regards,

L.A. Higgs
