

10th February, 1966.

Mr. Bruce Kelley,
Main Street,
HOLGOMB, New York,
U.S.A. 14469.

Dear Bruce,

The Atwater Kent Model 5A on first page of Fall 1965 QTB uses the varicometer to tune the antenna capacity for resonance. The two R.F. stages are untuned using so called wide band transformers. I secured a couple of the transformers for test. They peak around 750 KC with some gain down to 500 KC and give a loss above 1200 KC.

Best regards,

Steve Haber.
