14th December, 1965.

Miss Jennie Ewanowski,
Research Corporation,
405 Lexington Avenue,
NEW YORK, N.Y. 10017.

Dear Jennie,

Your letter of the 7th and enclosure arrived on the 11th. My old defunct Brush head phones do not have a number. The head phones I need have one phone for each ear connected by a band across the top of the head. This may be type "BA200-1", I suspect the "BA200-B" is the same thing with separate wires from each phone. This would allow stereo reproduction. These items are manufactured by the same Brush Company that makes the recorders, you might try them to get better information. Please secure one set of air cushions for these phones.

I will not need any of the alcohol for a long time, however, I would like to know where it can be secured. Probably about 1 liter will be required. Please send a copy of the analysis report by New England Nuclear Corp.

Please write Gilson Medical Electronics, 3000 West Beltline St., Middleton, Wisconsin, U.S.A. 53562, and secure information and literature about their 20 Pen recorder. Also find out the Pen coil resistance, full scale coil current and source resistance to provide critical damping. Also ask for a short sample of the chart paper.

Yesterday the plaster was removed from my arm and replaced by a light spiral bandage. This makes me feel better, however, the hand and wrist are still rather swollen and the wrist is still pretty stiff. I expect it to limber up as the swelling recedes and is given physiotherapy massage. Enclosed is a 50 cent stamp which still looks good, you can try running it through the system again.

Merry Christmas,

Grote Reber.
