Jennie:

Your letter of the 12th and enclosures arrived yesterday. Thanks.

I am writing a short note rebutting brother Stearns' on the lava flows and will send it direct to the Geological Society.

Unrealised by the editor, my scientific article in the december issue of Proc. IRE carried a bit of free advertising which seems to be working, judging by your enclosures. I'd like to take the following small gambles. Please send checks as follows:

To:  
Maritime International Co., 199 Front St., Hempstead, L.I., N.Y.; 100 dollars for one new UV206 tube in original box.

To:  
James A. Smith, 1314 Ridge Blvd., Conellsville, Pa., 40 dollars for one DeForest type D-10 receiver complete with extra coils.

The above are to be sent by railway express collect to me at Fingert and added to the pile of stuff I already have there. Someday, I'll get back to Bound Brook and use these items for more experiments in the laboratory there.

Things are going well here. I've been surveying at Bothwell to find the best way of installing the proposed antenna. There appears to be sufficient room for antennas three miles long both north-south and east-west. However the initial installation is to be only half this size.

Someday I'm going to have to make an income tax report. When available, please get for me two sets of the current forms 1040 plus an instruction book. Also I'll need the various deposit slips from Harris Trust & Savings Bank. All this can be sent together by sea mail.

In case I forgot to tell you; the Rockwell proposal may be discarded.
