AIR MAIL

Dear John,

I have been allocated the task by the Royal Society of writing the biographical memoir for Joe Pawsey. I expect you know that these memoirs are fairly comprehensive documents, and I am at the present time in process of collecting the basic information about Joe. I have managed to get quite a lot of documents about his early career at E.M.I., and of course from Mrs. Pawsey and others in Australia. My reason for writing to you is to enquire if you are able to give me any information about his association with Green Bank and the nature of the appointment which brought him to America when he became ill. Any publishable information which you can give me about this situation would be greatly appreciated, and of course I would be very happy to hear anything which you have to say about him generally, particularly if you were associated with him in his early research days.

With kindest regards,

Yours ever,
