May 10, 1985

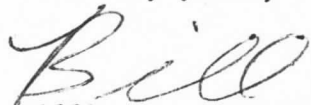

Dear Colleague:

Enclosed is a photo of the participants of the NRAO Workshop on Meter-Wavelength Radio Astronomy.

The spring semester here at the University of Maryland began before an appreciable fraction of the contributions to Workshop proceedings came in. Since then, I have not found time to assemble the documents or to bug recalcitrant authors. If you are in the latter category, consider yourself bugged. I'll assemble the document at the end of the semester, about 30 May. Any contributions that I do not have at that time will not be published. Thanks for your cooperation.

For your information, two of the VLA dishes are now equipped with prime-focus, 75-MHz feeds and testing is underway. Most of the interference problems caused by signals generated in the apex cabins of the telescope have been licked. A few problems remain, but they appear to be manageable.

Sincerely yours,

William C. Erickson
