15 August 1974

Dear Paul,

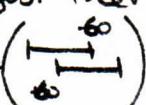

Enclosed are miscellaneous data for "Q.A.?" September run.

1. Catalogue of 868 single stars within 25 parsecs of Sun. Selected from Woolley et al catalogue, deleting known spectroscopic binaries and regular variables. Star names with asterisks beside them refer to notes in the Woolley et al list. I enclose copy of these notes, but not of the entire original list which is 100s of pages. Notes are very miscellaneous, some very important some trivial. The computer catalogue also lists $1950\alpha, \delta$, parallax, proper motion, spectral type and luminosity class, and radial velocities, all from Woolley et al catalogue. Some stars were unclassified in spectral type. These are given $O\phi$ designation in the computer. Luminosity classes are: ϕ - unknown, 2 - supergiant, 2 - bright giant, 3 - giant, 4 - subgiant, 5 - dwarf, 9 - white dwarf (look out for these!). Radial velocities are: VHEL - heliocentric, directly from Woolley et al catalogue, 999.0 km/s if unknown; VLSR - with respect to LSR, derived from VHEL by me using standard solar motion of 19.5 km/s towards $\alpha = 270^\circ.2$, $\delta = 29^\circ.9$ ($l^\text{II} = 56^\circ$, $b^\text{II} = 23^\circ$), 999.0 km/s if unknown.

2. Catalogue of 156 single stars within 40 L.Y. of Sun, giving observing parameters. This list (2 copies enclosed) should provide the basic "Q.A." program (i.e. not calibration lines, nor M82!). Given are: star # with * denoting note in the Woolley catalogue; distance

from Sun in L.Y.; spectral type and luminosity class; observing position including precession, aberration, nutation and proper motion to 23 September 1974 (1974.726); velocity of star relative to LSR in km/s ($999.0 = \text{unknown}$).

3. Precensed, aberrated and nutated positions for six strong H_2O lines, also to 23 Sept 74, in 2 copies.

I suggest that where $V_{LSR} = 999$ we observe at ± 60 km/s for $1/2$ time each  so that we get the central ± 60 km/s around zero velocity covered at "normal" sensitivity and the outer $\pm (120 - 60)$ km/s range covered at "half" sensitivity.

I go to NRAO on 17 Aug, return ~ Sept 9.

Cheers,

Aheb.
