

21st September, 1964.

Dr. O. H. Frankel,
G.S.I.R.O.,
314 Albert Street,
EAST MELBOURNE, C.2. VIC.

Dear Otto,

Mutations in Beans.

I enclose two colour slides, one showing a
scheme of the probable way in which Dr. Reber's beans
appear mutating and the other close ups of the colour
variants of the beans themselves.

He (and I) would like to know whether this
behaviour is novel or important and worth carrying further,
and what is the probable story behind it.

Kind regards,

Yours sincerely,

D. Martin,
Officer-in-Charge.
