

September 16, 1963

Dear Mr. Reber:

You have received a letter from James Svihlik of Berwyn, Illinois, as follows:

"I have this Traxler portable with five tubes for \$12.00. Also Stewart Warner Model - 300, no tubes for \$12.00. Also the test oscillator (comes in a suitcase) for \$12.00. Shipping extra on all sets above. If not interested please send me the pictures back."

I recall your once saying that you were no longer interested in buying old radios, but will you let me know specifically concerning the above. If you're interested I'll send along his drawings. If not, I'll return them to him.

We haven't had much luck in locating the portable electroplating device which you asked about in a recent letter. The men here and in Bound Brook don't know about it. Someone thought it had been advertised in "Popular Mechanics" but I couldn't locate such an advertisement in some recent issues. Am waiting for word from an electroplating equipment company; when I called about it one of the men there suggested putting the description in writing and he would see what he could find out about it. This I did. Where did you see or hear mention of it?

Sincerely,

Jennie

Before I sealed this a letter came from James H. Stegner, as follows:

"Hi! from the warm southland. Have remarried and am working in the Research and Development end of AMINCO (American Instrument Co.) of Silver Spring, Md. Am in the Optical-Mechanical-Electronic end of scientific devices such as "Spectrophotometers" and "light scattering" equipment -- suppose you are familiar with. Love the work and am "right at home" so to speak. Am still delving into ancient radio-wireless gear. Anything you need? and what's new with you?"

He too sent a drawing - noted as an "Old 'Crystodyne'"

His address is now: 6913 Westmorland Avenue,
