

19th July, 1963.

Professor E. A. Cornish,  
Division of Mathematical Statistics,  
University of Adelaide,  
ADELAIDE, S.A.

Dear Alf,

Professor T. A. Davis  
Indian Statistical Institute.

Dr. Reber, a Hon. Research Fellow of Division of Radiophysics and operating here, has a secondary interest in twining plants and has been corresponding with the above who has been interested lately in the yield of coconuts in relation to direction of twist (J. Genet. 58 : 186-215).

Prof. Davis or his Director Prof. Mahalanobis F.R.S. may be known to you. The former writes that he would like to work in our Institute for a month or so, it is not clear whether in our Tasmanian Regional Laboratory or in the Organization generally. His Institute would be able to bear air passage to and from India so long as it did not require foreign exchange.

Would you be interested in a visit from this man, it seems just possible that Mac with his interest in coconuts might have something in common with him and might take him around on one of his trips to New Guinea.

There is space for him here but I don't really think he would get much beyond a few days.

Kind regards,

Yours sincerely,

D. Martin,  
Officer-in-Charge.
