Dear Don,

I have just returned from New Guinea, so there is no prospect of taking Prof Davis - tax. ~~He~~ however there is not much interest in the twisting of coconuts. It usually connects itself and the local nation is damage to a spathe causing asymmetry in the development of a nut loop which persists for some time partly a kink and then a spiral into the trunk. Anyway I have no evidence whatever on the subject.

I would be willing to show him around + introduce to various people but my plate is too full to be able to give him much time.

Kindest Regards
True
