

socket mount assembly on partition

Socket 5-13-42

5-14-42

Tube shield

5-14-42

Subst. base

Reverse the antenna
coupling stub lines

Replace the capacity
cylinder with a
capacity disks

Make coupling stubs
and transmission line
coaxial and concentric
end on.

This design will
allow each section
of grid line to
be increased from
10" to 11" which
allows larger
conductors and less
loss in grid lines

Cone cover to be disk
with radial channel offset
to cover coupling stubs and
Antenna-Grid Input System.

1-10-43

Location of
Amplifier inside
of cone

This design allows
amplifier to be
placed practically
entering antenna cone.

Capacity cylinder
Antenna coupling tube

See over for an
alternate design

Cone cover to be a disk
with only small cylindrical
offset at center to cover capacity
cylinder and coupling tube.

AIEE July 1934 page 1047

$$R = 41.6 \sqrt{f} \left(\frac{1}{a} + \frac{1}{b} \right) \cdot 10^{-9} \text{ ohms/cm.}$$

a = inner radius of outer conductor in cm.

b = outer radius of inner conductor in cm.

f = freq in cycles/sec.

Handbook of chemistry and physics.

$$C = \frac{.2416}{\log_{10} \frac{a}{b}} \cdot 10^{-12} \text{ farads/cm.}$$

Since effective circuit capacity across end of line is one-half the total line capacity, the effective line capacity is one-half the above value or

$$C = \frac{.1208}{\log_{10} \frac{a}{b}} \cdot 10^{-12} \text{ farads/cm.}$$

$$RC = 5.03 \cdot 10^{-21} \sqrt{f} \left(\frac{1}{a} + \frac{1}{b} \right) \frac{1}{\log a - \log b}$$

a is the variable.

$$RC = 5.03 \cdot 10^{-21} \sqrt{f} \frac{1}{a(\log a - \log b)} - \frac{5.03 \cdot 10^{-21} \sqrt{f}}{b(\log a - \log b)}$$

Top cover plate with
3 1/2" hand hole

Tube

Living to push
pull circles

series stub bins
may be inserted and
removed thru open
bottom. Soft soldered
in a ring to wall
at x thru top hand
hole and bottom open.

This construction
allows coupling stubs
to be easily changed
without disrupting
entire assembly.
Obviously the stubs
themselves will have
to be hard soldered
at y and all other
sub assembly points
