

Walter van B. Roberts  
155 Hodge Road  
Princeton, N. J.

Aug 20, 1959

Dear Mr. Reber:

We will be delighted to have you stop in here on your way to New York. If you are driving you might even find it more convenient to leave your car here and take the train to avoid city traffic. But I hope you are not coming until after Sept first as we expect to get back that day from a trip to visit my brother Dick at another of his summer places--this one is on the site of the ghost town of Pithole in western Penna.

By the way, there is a Sam Reber living in Princeton. We rented our house for the winter recently to his brother, Col. Miles Reber. Come to think of it, I believe he was Gen. Reber. You might like to call and see if you are related.

Inasmuch as we will have a chance to discuss old times (radiowise) so soon, I will let you take a quick look at my thin little book to see if you really want to borrow it. Meantime I will just say that the stabilized oscillator is described in my patent 1966046 which I will also show you here.

Looking forward to meeting you,

Sincerely yours,

*Walter Roberts*
