Dear Paul:

Recently I asked Ionosphere  
Prediction Service in Sydney for  $f_oF_2$  data  
on Winnipeg. They sent data on Kenora,  
Ontario apparently thinking it is same as  
Winnipeg. I've never heard of Kenora  
before. From way numbers run, I suspect  
Kenora is near western edge of  $75^{\circ}W$  time  
zone, perhaps near Georgian Bay. The data  
is good and seems interesting, so I'm  
analysing it. Please tell me where Kenora  
is, its latitude and longitude, and send  
xerox of suitable part of appropriate map.

As ever,

*Grote Reber*
