

1st March 1983

Dear Dr. Rees:

Thank you for your flattering letter of 16th which arrived on 25th. Perhaps I may impose upon the Society by using this occasion to promote my current pet heresy - Debunk the Expanding Universe.

Enclosed is a note which appeared in Physics Today, november 1982. The University has received over seventy requests for no. 9. They come from 24 states inUSA and 10 foreign countries. A peculiarly large number are attracted by the religious aspect. Perhaps God is not dead after all.

At your descretion, you may read this letter and the enclosed note. I wonder if it will spark a discussion?

Yours sincerely,

Grote Reber
