

8th January, 1965.

Dr. H. A. K. Lamprecht,
Plant Breeding Institute,
Weibullsholm,
Landskrona,
SWEDEN.

Dear Dr. Lamprecht,

Colour Pattern Mutants in Beans.

Dr. Bruce Griffing of C.S.I.R.O., Division of Plant Industry, at Canberra, has given me your name as being a person who could advise me.

I have been studying the twining of beans as a minor scientific interest and in the course of this I have found some striking colour mutations in my material which are illustrated by the enclosed slides.

I would be grateful if you would let me know whether these mutations are novel or of sufficient scientific interest to be worth pursuing. I would be grateful also for any reprints on the subject.

Yours sincerely,

Grete Reber.
