Dr. George Robert Snow, F.R.S.,
Houston,
Moorland Road,
Budleigh,
Salterton,
DEVON . . . ENGLAND.

Dear Dr. Snow,

A pen friend of mine Prof. T.A. Davis has mentioned you in a recent letter. Apparently you have knowledge about German papers near the turn of the century. These relate in some way to growth of vines on supports and along the ground. I would be interested to learn the exact references so that I may gain an entry to the appropriate literature.

Enclosed is a reprint of mine entitled "Reversed Bean Vines". A more sophisticated article will appear in the next issue of the Journal of Genetics.

Your consideration, comments and advice will be appreciated by me.

Yours faithfully,

Greta Haber.
