

We still have many
memories of our visit
there ~~you~~^{last} winter
and it was good to see
Alan again this summer.
You didn't miss much in
Grenoble, astronomically.
Towards the end, Robin
Conway, some other J.B. types
and we hired a car,
took some powerful cheese,
local plonk and climbed
a mountain. We enjoyed
ourselves even more by
thinking of the rest of the
conferees - although they
may also have been up
their own mountains.
Professional note: we tried
JGC 315 again. No clear rot¹,
can see 23727 em. Got good

To Alan and Mary
Wishing you both
a Very
Merry Christmas
and
Happy New Year

from

Derek, ~~See~~

P.S. Apart from possible "political" problems in its use, we have available as a digital area photometer which should be absolutely linear for doing optical morphology (e.g. major axis etc) for radio galaxies. Would you be interested in sending us an astronomical thesis? ²

We still have happy memories of our visit chez vous last winter and it was good to see Alan again this summer. You didn't miss much in Grenoble, astronomically.
