New York 19, N. Y.

Dear Dr. Berkner:

As you know I am doing an extra-circular experiment on twinning vines. I am raising fifty hills each of eight different varieties of pole beans. It occurred to me that it might be interesting to raise another row of Kentucky Wonder beans which had been irradiated by suitable radiation. By air parcel post I am sending a small amount of these beans. Please have them properly irradiated at Brookhaven and returned to me. The planting time is getting late so I would appreciate this being done promptly. I already have a good stand of normal beans.

Sincerely yours,

Grote Reber
