

Vine from Mavrousk

- 24/8/65 Dug six samples from west side of road 150 ft north of hotel. These plants are on a small patch of sandy soil. Placed plants in boot of car with quite a lot of soil.
- 25/8/65 Planted these plant roots in the soil, in six 4 gallon cans in glass house. Watered well.
- 17/9/65 Few small buds showing on some vines
- 20/9/65 Three leaves now visible.
- 27/9/65 Two plants have several shoots and leaves. Two more pots have buds. Two pots appear dead. Took 2 fotos.
- 15/10/65 Two pots have shoots 5" to 8" long. One pot has shoot 3" long. Two pots have small leaves. One pot appears dead. Took two fotos
- Planted two pots each with five garlic bulbs.
- 25/10 A few shoots of garlic have come up -
Set four stakes and tied a few wire runners.
- 25/11 Five pots doing well
- 17/12/65 All five now have shoots 2-5 ft high.
- 2/1/65 3pm. Glass house closed and severely overheated, all vines a bit wilted. One badly dried with leaves brittle. Opened ridge ventilators and doors. Watered vines well. Apparently these large plants evaporate a great deal of water and quickly exhaust water in a four gallon pot. Must be watered every second day.
- 3/1 About half the leaves on badly dried vine have recovered. However the tips of runners are dead. New shoots starting just below tips. Rest of vines OK. This was close shave!
- 7/2 Vines growing strongly. Two have reached top of glass house.
- 14/3 Vines still growing but no flowers.
