Subject: NATO Grant
Date: Thu, 10 Jun 93 19:13 GMT

Dear Alan and Paola,

I have (at the third attempt) extracted an application form from Brussels. The deadline is August 15th. The main pieces of text are a research plan and a statement about the roles of the various groups in the project. I will draft these and send them to you for comment. The form differentiates between principal investigators (one per institution) and participants (postdocs, students, etc.). At the moment we have ourselves as PIs and Marco Bondi as a participant. Should we include others? I'll act as project coordinator unless either of you would like to volunteer.

Various pieces of information are required: brief CVs, suggestions for 3 referees (in countries other than participants') and cost estimates. I will send you copies of the CV forms by paper mail. Any ideas about referees (I assume that they must also be in NATO member countries, although the instructions are not explicit)? George Miley occurred to me as one possibility.

Best wishes, Robert

Re referees, if we're looking for NATO countries other than Italy,
Britain and USA, how about, in addition to Miley of course:

Canada: Ernie Seaquist, Phil Kronberg, Anne Gower
Germany: Richard Wielebinski, Richard Porcas
Holland: Richard Schilizzi, Richard Strom, Bob Sanders

Why are so many named Richard.*?

If you have anything describing the grant program in general I'd
like to get a copy under the business division's nose here as
they have to get involved in any applications that are made by
NRAO staff, and it won't work to leave it to the last minute.

Cheers, A.

Hi Robert,

Yes I'd tried to send you quite a few odds and ends before you left but they all came winging back to me between 3 days and a week and a half later (mysteries of the net, eh?).

I got the general info on the grants, and NRAO business office does not have to be involved (great!!).

I didn't get a CV form though, can you send it a.s.a.p. as I'm off to Canada on July 29th and won't be back until August 16th.

Dave and I have been working hard on the correlation stuff and it's getting very close to finished, I'll send you a copy of the draft as soon as I get the latest set of changes and additions in. Probably early next week.

Heard from Stephen earlier this week with some questions re the L band data, sounded as though he's getting on pretty well. is he going to get finished on time, i.e. before he starts med school?

Cheers, A.

P.S. How did the meeting in Oz go? Any excitement?

Dear Alan,

I have mailed you a copy of the CV form, and will also fax one tomorrow a.m. so that, if all else fails, you can E-mail the necessary info to me.

I'll send a draft of the case in a day or two.

A copy of the draft in the state you leave it would be fine. I don't think that there should be a problem with the postscript files, but a paper copy would be a useful backup if you can square the loss of trees with your conscience.

Cheers, R

The conceptual problem of feeding the same piece of paper in twice does seem too baffling to contemplate sometimes. As it happens, the second page says only:

Recent selected publications (additional pages should not be attached and reprints should not be enclosed)

at the top of an otherwise blank A4 page. I'll format it if you would care to do the selection. Meanwhile, I will feed the offending fax elf to a passing dragon.

Cheers, Robert

Hi Robert,

>From a first reading I have only a few comments, it looks pretty
good overall (presuming it's at the right overall level of detail,
who knows?)

Main points are on p.3 of part 1:

para. 2: "The inference of DP asymmetry in FRI sources is indirect,
being based in most cases on an asymmetry in the degree of
polarization at one frequency. We wish to observe at several
frequencies to test whether this asymmetry is truly a Faraday
effect."

2.4, bullet 1:

"Can we detect the counterjets at all distances from the
nucleus, and thus image the jet-counterjet intensity ratio
as a function of distance from the nucleus and of
distance from the jet axis?"

2.4, bullet 4:

summarize the expected differences.
should we be able to confirm them?

Smaller points:

1.1, 2nd sentence

clarify that this is total luminosity of source (could
be misread as jet only)

2.3 Statistical studies

give size and definition of sample

references

Bicknell 1993 needed
Biretta & Meisenheimer 1993 needed
Bridle 1985 needed
Laing 1992 needed
Parma et al. 1993 is 1993a
Parma et al. 1993b is needed
Urry et al. 1991 needed

2nd part:

Last sentence's import is unclear (to me). Do we simply need to spell out that grant will be used to fund travel associated with the project but not directly involved with taking VLA data. as that will come from normal unstitutional budgets?

The number of visits seems about right. More might be quite productive, to remove people from their local interrupts. Less would be too few.

Cheers, A.

Dear Alan,

Thanks for the quick reply. References are in hand. I really don't know about the level of detail but will try to find someone locally who has got one of these grants. On re-reading the draft this morning, I wondered whether there was too much background and too little about what we wanted to do. On the other hand, the referees may appreciate the detail. Any ideas? Do you have first choices amongst the referees you suggested?

The reason for the last sentence in the "who does what" section was merely to point out that we were not asking for money to fund something which I believe is specifically excluded by the NATO rules (although they only mention conferences, symposia etc. explicitly).

Regards, Robert

Hi Gareth,

Just read through your AIPS++ document and noticed the stuff about funding travel. Is it possible that AIPS++ could qualify for NATO funding, as there are four NATO countries involved - UK, Holland, Canada, US. There are NATO funds available to support travel for projects that involve (I think) 3 or more NATO countries. Normally these are for "science" projects but I presume it would not be too hard to write some AIPS++ activity up in a "science" wrapper.

A.

Dear Alan,

The address for NATO is:

NATO Scientific Affairs Division,
B-1110 Brussels,
Belgium

Tel (02) 728 41 11
Telex 23-867

The phone number is that quoted on the top of the grant application. It's the number dialed from within Belgium, so for international calls I think you have to dial 32 2 728 41 11 (i.e. add the country code and lop off a 0).

Alternatively, you could try the numbers for the Director of Collaborative Research Grants:

Dr Jose A. Rausell-Colom

32 3 728 46 37

Dear Alan,

Just to let you know that we have got a NATO grant, to
the tune of 180 000 Belgian francs (whatever that is in real
money). I'm just sorting myself out after getting back from La Palma -
I'll contact you again when I have woken up.

Cheers, Robert

Great! I'd guess that's about \$5000?

Cheers, A.

Dear Alan & Paola,

I propose to set up a bank account in the UK for this, and to move money around using direct transfers rather than cheques, since the latter appear to be slow and expensive. My bank tells me that they have regular dealings with the Banco Nazionale di Lavoro (excuse spelling if I've got it wrong!) but are less certain about banks in Charlottesville. Any idea which of the Charlottesville banks admit the existence of a world beyond Roanoke?

Let me know if you have any suggestions or objections.

Regards, Robert

I deal with the Crestar Bank, which did not exhibit any obvious problem dealing with the one direct transfer I ever had done from a bank in the U.K. It is a multi-state (regional) bank with its headquarters in Richmond, Va. and has an office not far from the NRAO (you may remember it as the United Virginia Bank).

What sorts of transactions do you visualize that we will need?

A.

Robert,

I remembered that I wanted to say something about your successful NATO grant (apart from congratulations). If I can be any help on this project then I would be happy to contribute. I am developing and refining a new jet model for FRI's, a version of which I presented at the AGN symposium. This will be available if you want to use it. I also plan to collaborate with the Bologna people in fitting the model to their latest data. This may or may not fit in with your plans.

You should also understand that I will not be offended if not included. The offer is there if I would be useful to you. Of course I do not expect any access to the NATO money!

One thing I do plan to do is to try out your idea of the differences in jet bases being due to relativity on a couple of selected sources. That is I plan to model some sources where there is a gradual increase in surface brightness at the base in one of the jets.

Regards,
Geoff

p.s.1 Postscript version of poster paper to follow.

p.s.2 Thanks for the postscript info. I guess this is one of the problems with public domain programs and a not strictly enforced standard. Anyway, whatever, the paper is printed out and is now in my pile waiting to go off to PASP. I also recieved some good news that Judith Perry's paper is about to materialise, so I have just about a 100% success rate.
