Dr. Grote Reber
G. P. O. Hobart
Tasmania, Australia

Dear Grote:

Following close on the heels of my last epistle we received an inquiry from Berkner concerning the possibility of seeing the model of your big dish sometime in January. I understand that the National Science Foundation is giving Associated Universities (Brookhaven) \$100,000 to run a survey on the feasibility of something super - colossal, and if so the best geographic location probably east of the Mississippi.

I don't know to what extent you might want to become either involved in any of this or what you might wish to do about making further information and the model available for some of these people's inspection in such a rush. If the idea strikes your fancy at all, I presume that someone has the keys to the attic in Wheaton and if called upon with authorization and instructions from you might be able to put all this in the reasonably clear light of Chicago Bay, for example, for a look in our office there or shipment here. This is on the assumption that your brother (it is my recollection that you told me that your effects were stored at his place in Wheaton) would not be particularly disposed to entertaining any series of visitors there for such a purpose.

Once again, best wishes on all counts.

Sincerely yours,

Charles H. Schauer
