Dear Dr. Martin,

In the „Handbuch der Pflanzenphysiologie“ or „Encyclopedia of Plant Physiologie“ Vol. XVII/2 (Springer-Verlag, Heidelberg 1962) is the publication in French by L. B a i l l a u d: Les mouvements d'exploration et d'enroulement des plantes volubiles (page 635-715). The last 7 pages are only references (bibliographie). I think Dr. Grote Reber will find there every new publication about the problem he is interested. I am sure you may get the „Handbuch“ Vol. XVII/2 from the CSJRO in Melbourne.

In August to November this year we plan to go to Kenya, South Africa and Southwest-Africa.

In Nairobi (Kenya) I have to submit a paper on the Congress of Intern. Union for Conservation of Nature and to South Africa I got an invitation to the Jubilee Festivity of the Botanical Garden Kirstenbosch near Capetown.

We have a very severe winter this year. 3 months with snow and frost several times of -20°C.

I hope the spring will come soon.

Kindest regards to both of you

Yours sincerely

*H. Walter*
