Dear Mr. Reber:

Thank you for your letter of July 12th, and for your continued interest in the CLBA. The Canadian Government has recently increased its interest and its resources for R&D considerably, and NRC will be building two new major laboratories: one for biotechnology (Montreal) and one for Industrial Technology (Winnipeg). We are now preparing a further dossier addressing more of Canada's needs for fall presentation. The CLBA will certainly be included. We have had very great expression of support for this project from many communities in the West.

I am much interested to learn of the success of your "Occasional Paper No. 9". I should be very happy to have a copy. You will be interested to know that:

Professor Paul Marmet, OC
Département de Physique
Faculté des sciences et de génie
Université Laval
Ste-Foy, Québec G1K 7P4
Canada

has addressed the first point of your Physics Today Letter and has proposed an alternative explanation to the Doppler effect being responsible for some red shifts. You might be interested in obtaining a copy of his remarks.

With best personal wishes, I am,

Cordially yours,

Larkin Kerwin, CC

Canada

Sent copy on 30/8/83 from Stowell.
